Descrizione

Cavo di sicurezza con brevetti internazionali per attrezzature in pressione.

DESCRIPTION

Whip Checks are required by law as a safety measure to avoid injury in case of hose or coupling failure.

The BASIC version is coated free.

Whereas traditional WHIP CHECK must be inspected prior to any pressurized equipment being turned on, NEW WHIP CHECK is easier to install and doesn't require a check every time equipment is about to be used.

Traditional whip check must be installed at a fully extended position—providing this way a standby safety for hose. NEW WHIP CHECK instead, can be applied without being fully stretched, thanks to the choking system that allows a stronger and firmer grip on the hose.

*Apply New Whip Check at each hose connection and from equipment to hose.

By pulling back the coupling, let the loop of New Whip Check over each hose.
